                                                                                                                                                                                                                                                                                                                                                                The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome, and (b) detecting a profile of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses.

```
The ammonium transporter (AT) gene isolated from Arabidopsis thaliana (AAQ88327) is a preferred AT gene for use in generating transgenic plants. AT gene sequences can be incorporated into expression constructs in the sense orientation (for expression of translatable mRNA and hence synthesis of AT in the transgenic plants) or in the antisense orientation (resulting in antisense transcripts which inhibit synthesis of endogenous AT in the transgenic plants). Nitrogen metabolism is altered in the resulting transgenic plants; the changes in AT activity may also result in plants which are suitable for "low input" crop management or which can be grown in acid soils. Yeast and bacteria can also be transformed with

The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome, and (b) detecting a profile of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                        Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             475 TCCTCTACCAATGGGCCTTCGCCATCGCCGCCGCCGCCATCACCAGCGGAAGCATCGCCG 534

The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abictic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         226
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  206
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               346
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        107 GGCCCAACTTCTCGGCCCAAACACCACACAGCCTCCGCCGCCGCCGCCTCCCTTATCTGCGG 166

The invention relates to a novel ammonium transporter protein comprising 10% homology based on the Clustal method compared to: a corn ammonium transporter polypeptide of 183 or 63 amino acids; a soybean ammonium transporter polypeptide of 500 or 486 amino acids; a wheat ammonium transporter polypeptide of 494 or 470 amino acids; and a rice ammonium transporter polypeptide of 494 or 470 amino acids; and a rice ammonium transporter polypeptide is useful for selecting an isolated polynucleotide that affects the level of expression of the ammonium transporter protein appared in a plant cell. The ammonium transporter protein is useful for preparing antibodies which are useful for detecting the transporter protein in situ in cells or in vitro in cell extracts, and as transporter protein in situ in cells or in vitro in cell extracts, and that are useful as herbicides. The isolated polynucleotide is also useful for creating transgenic plants in which the polynucleotide is also useful for creating transgenic plants in which the polynucleotide is present at this per pairs which are useful in amplification or primer extension reactions. This polynucleotide sequence represents the cDNA encoding a corn high affinity ammonium transporter protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel ammonium transporter polypeptide useful for identifying enzymatic inhibitors, which is homologous to corn, soybean, wheat or rice ammonium transporter polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ammonium transporter protein; herbicide; transgenic plant;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Location/Qualifiers

The present invention describes an Arabidopsis thaliana nucleic acid (I) comprising a sequence capable of hybridising under stringent conditions to a sequence (SI) selected from any one of the 999 sequences given in ABL93236 to ABL94234. (I) have insecticide and fungicide activities, and they can be used as protein expression modulators. (I) can be used in identifying homologous or related genes, in producing compositions that modulate the expression or function of their encoded proteins, mapping functional regions of the proteins, and in studying associated physiological pathways. (I) can also be used: (I) for the genetic physiological pathways. (I) can also be used: (I) for the genetic of various plant strains to determine the strains that are best capable of various plant strains to determine the strains that are best capable of withstanding a particular disease or environmental stress; (3) for enhancing or inhibiting production of a biosynthetic product in a plant; (4) as probes in mapping and in diagnosis, in genetic modification and for screening purposes, to generate additional copies of the nucleic acids, to generate ribozymes or antisense oligonucleotides, and as single stranded DNA probes or as triple-stand forming oligonucleotides; and cata for this patent did not form part of the printed specification, but was obtained in electronic format directly from the specification, but we obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1350
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1410
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1470

methylation in genomic DNA, useful for selective hybridization of amplicons the degree of cytosine id prognosis, comprises Determining the degree of cy diagnosis and prognosis, com from chemically treated DNA.

Claim 12; 56pp + Sequence Listing; 56pp; German.

This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic cytosine (C) but not methylated C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligomucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of cligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               635
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         636 GTTCGCCACCACGGCCACAACCATGGCGCGCCATGGCTGAACGCTGCAACTTTAA 695
                                                                                                                                                                                                            The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell.cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLGABLSOSII), expressed DNA sequences (ABLO1840-ABLIGITS) and the encoded proteins (ABBS7737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /*tag= a

                                                                                                                                                                                                                                                                                                                                                                                                                                          genetically normal, are carriers of, or are affected with X-linked progressive retinal atrophy (XLPRA), by testing a biological sample with genetic markers that co-segregate with a XLPRA gene locus. The invention also relates to canine retinitis pigmentoes GPase regulator (RPGR), RPGR mutants and their corresponding nucleic acid molecules. The mutated RPGR genes are responsible for the XLPRA in dogs. Methods are used to select dogs for breeding so that dogs carrying the mutated locus are eliminated from the breeding stock. The method particularly applies to Siberian the disease is X-linked. XLPRA1 type is identified in Siberian Huskies, and Samoyeds, while XLPRA2 type is identified in Miniature Schnauzers. The present cDNA sequence is the normal open reading frame (ORF) 15 encoding Canine retinitis pigmentosa GTPase regulator (RPGR) protein found in normal dogs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1064
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cricererectricecererececeraceinacirererecerrerereceere

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention isseful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABBS7737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Batent No. 6620610

GENERAL INFORMATION:

APPLICANT: FROWMER, Wolf-Bernd

TITLE OF INVENTION: DIAS SEQUENCES FOR AMMONIUM TRANSPORTER,

TITLE OF INVENTION: DIASMIDS, BACTERIA, YEASTS, PLANT CELLS AND PLANTS;

TITLE OF INVENTION: CONTAINING THE TRANSPORTER

NUMBER OF SEQUENCES: 2

CORRESPONDENCE ADDRESS:

ADDRESSE: Ostrolenk, Faber, Gerb & Soffen, LLP

STREET: 1180 Avenue of the Americae

CITY: New York

STATE: NY
                                                                                                                                                           208, App

CONNTRY: USA

COUNTRY: USA

CONFUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.25

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/232,463

FILING DATE:

CLASSIFICATION NUMBER: US/07/935,313

FILING DATE: 26-AUG-1991

ATTORNEY/AGENT INFORMATION:

NAME: BENT, Stephen A.

REFERENCE/DOCKET NUMBER: 29,768

REFERENCE/DOCKET NUMBER: 30472/114 IMMU

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 2, Application US/09130114

Sequence 2, Application US/09130114

Patent No. 5976807

GENERAL INFORMATION:
APPLICANT: Horlick, Robert A.
APPLICANT: Bamaj, Bassam B.
APPLICANT: Robbins, Alan K.
TITLE OF INVENTION: Eukaryotic Cells Stably Expressing Genes TITLE OF INVENTION: From Multiple Transfected Episomes
FILE REFERENCE: 0867/1903081

CURRENT APPLICATION NUMBER: US/09/130,114

CURRENT FILING DATE: 1998-08-06

NUMBER OF SEQ ID NOS: 36

SOFTMARE: FastSEQ for Windows Version 3.0

Patent No. 5976807

GENERAL INFORMATION:

APPLICANT: Horlick, Robert A.

APPLICANT: Damaj, Bassam B.

APPLICANT: Robbins, Alan K.

ITILE OF INVENTION: Eukaryotic Cells Stably Expressing Genes

TITLE OF INVENTION: From Multiple Transfected Episomes

FILE REFERENCE: 0867/120903US1

CURRENT APPLICATION NUMBER: US/09/130,114

CURRENT FILING DATE: 1998-08-06

NUMBER OF SEQ ID NOS: 36

SOFTWARE: FastSEQ for Windows Version 3.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 5452;
